

Exp B (P1): information floor and the scissors gap — measured ($NA(N, b = 8, B; \kappa)$, $L = 512$, 3 seeds)

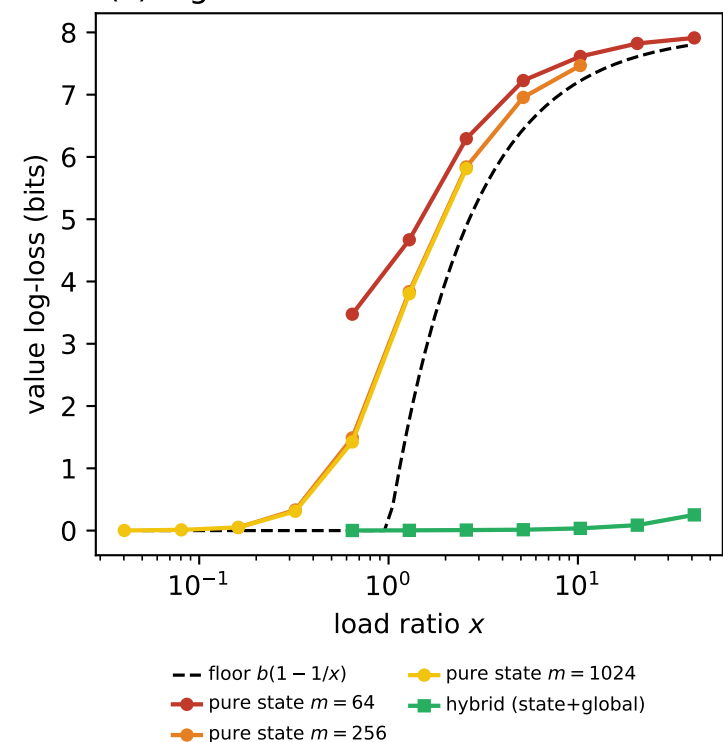

(a) the measured scissors gap (κ high)

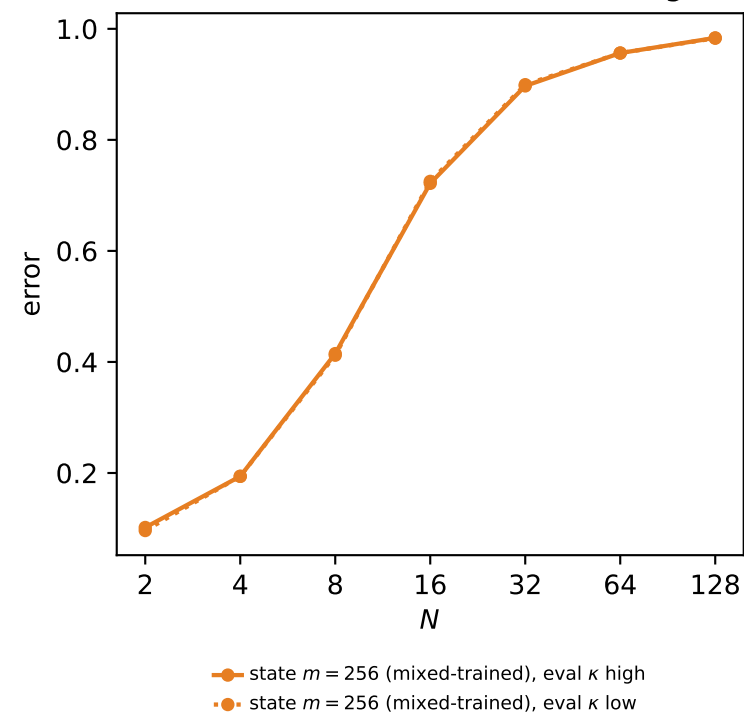

(b) collapse onto one master curve

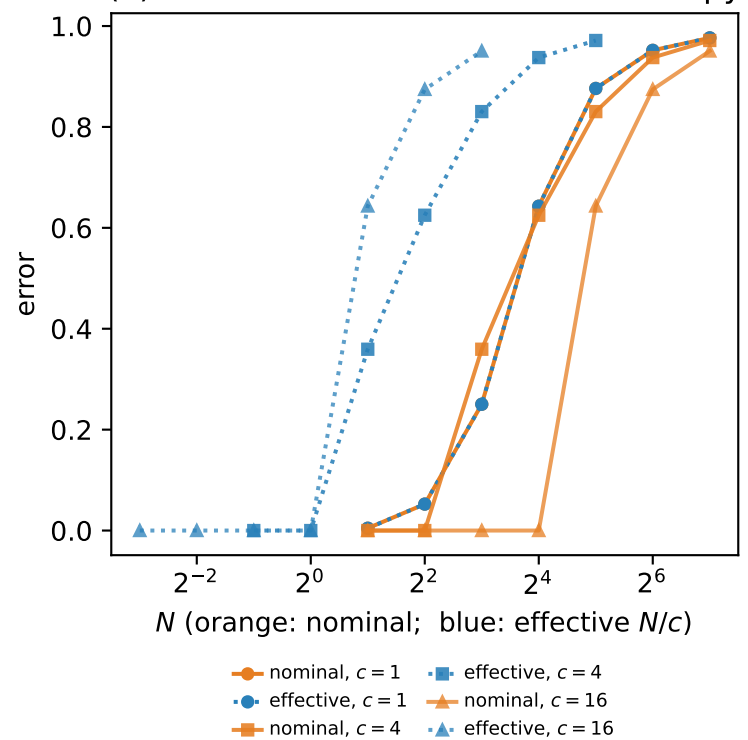

(c) log-loss rides the information floor

(d) κ interference at matched weights

(e) the wall bites on *effective* entropy

(f) horizon wall: cliff, not slope
